

**Department: Aerospace Engineering**  
**Level and Major: Undergraduate**

**Division: Flight Mechanics**

---

**Course Title:** Introduction to Aerospace Engineering

**Number of Credits: 3**

**Prerequisite -**

**Lecturer : Kamran Raissi**

---

**Course Description:** Familiarize the newly entered aerospace engineer with an overview of the major, the subjects to be taken during the undergraduate study, as well as the aerospace vehicles.

**Course Goals and Objectives:** Prepare and motivate the student for a four year program in aerospace engineering, give him/her an outlook of the future job prospects, and graduate education.

**Course Topics:**

- What is higher education
- What is engineering
- What is aerospace engineering
- Graduate studies in aerospace engineering
- Job prospect for aerospace engineers
- Airplane
- Helicopter
- Projectiles
- Satellite
- Spacecraft
- Engines
- Aerodynamic overview
- Flight mechanics overview
- Structure overview
- Propulsion overview

**The course aims to (outcome):** students gain the necessary competence for planning their education and future job.

**Evaluation: Homework**  
**Midterm Exam**  
**Project**  
**Final exam**

**Reading Resources**

**J. Anderson, "Introduction to Flight", McGraw-Hill Higher Education, 2005**

**Anon., "Aviation Fundamentals". Jeppesen Sanderson Training Pr; 7th edition (1994)**
